# Aluminum Windows & Doors

As Sunset Windows and Doors, we design and manufacture all of our metal mullions & frames in house.

Our R&D team continuously works on new and innovative designs, to bring you top quality products.

Our wide range of aluminum windows and doors are being used on all over the world from Siberia to Dubai, from Los Angeles to Mumbai.

When it comes to finishes, we can match any RAL color you want, or offer you different options like anodized, electrostatic powder coatings or wood grain coating options.

Aluminum is the one of the most durable materials on earth for architectural needs. Or designs are limited with your imagination, we can develop custom designs for your particular needs.

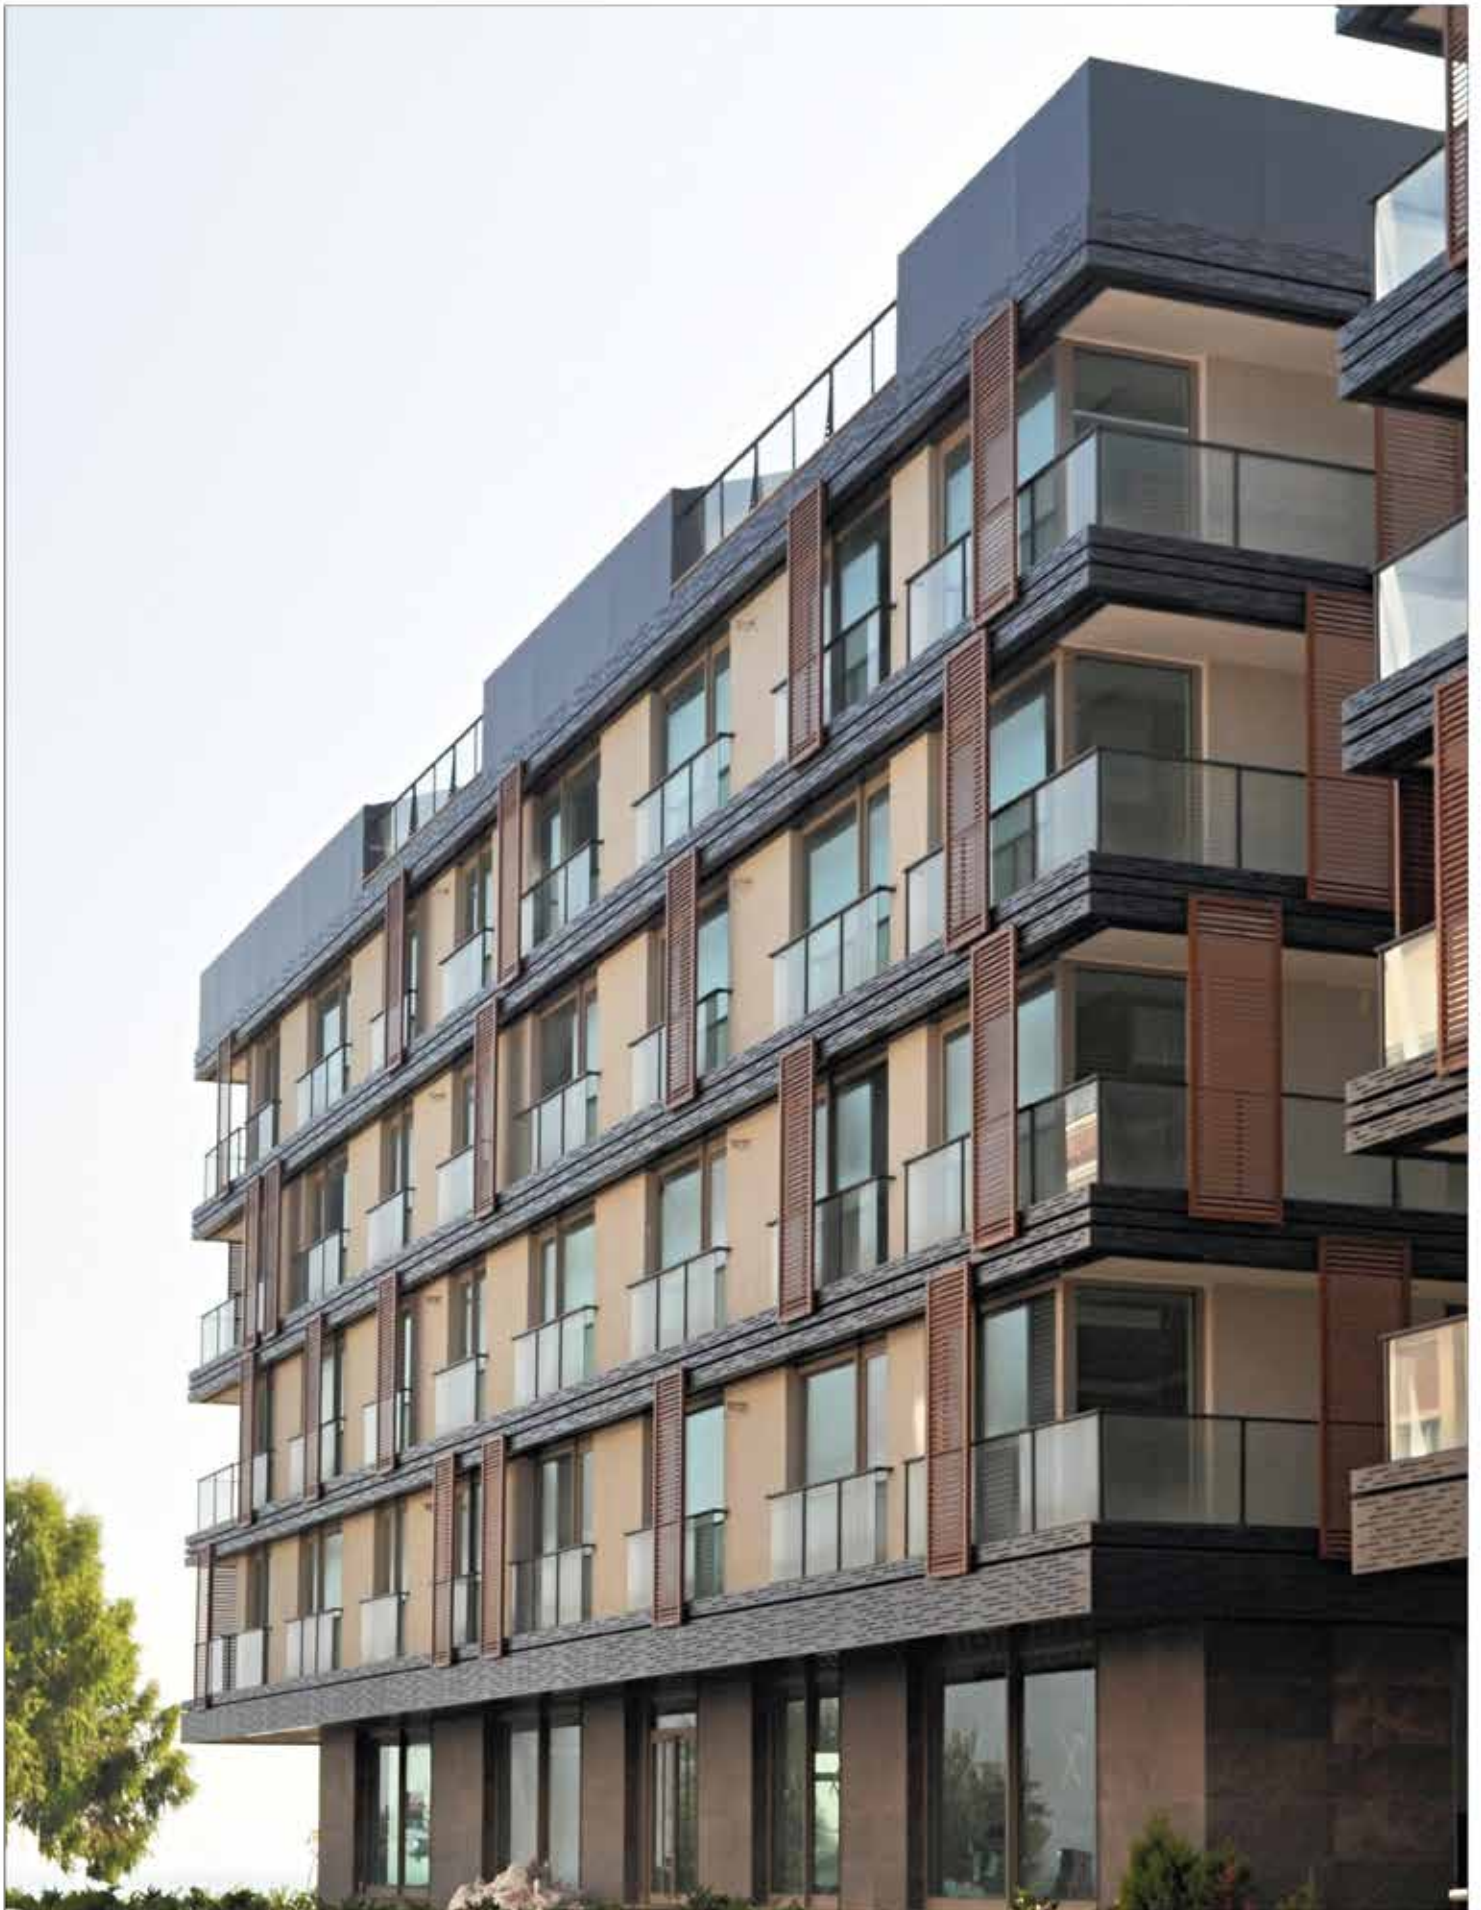

Saving Energy - Passive Buildings - Green Building concepts dictate higher standards for all components in today's buildings. Our product line provides excellent solutions for your needs when it comes to conform and surpass these standards. We use best thermal breaks and barriers available on the market today.

Aluminum alloys are more durable than steel, they're stainless and never turn yellow in the long term. They have excellent light reflection coefficients, virtually any RAL color can be applied on them with long warranty durations.

Aluminum is a 100% recyclable material and eco-friendly from production to consumption, and gives an endless design flexibility.

Sunset Windows and Doors, offers a broad range of aluminum sliding systems. They simply enhance your spaces. We treat every project as custom and we tailor them to suit your needs. They may be standard sliding systems, lift & slide type systems, tilt & slide/turn systems or folding/sliding systems.

Since we build and test our doors & windows to last, you can enjoy them for years to come. Each of our product families is tested for air, water, and structural performance and certified by the NFRC and NAMI..

Sealed stainless steel ball bearing rollers make our sliding glass door easy to operate and they need very minimum maintenance.

Our sliding glass doors and windows feature dual-paned low-E glass for better energy performance. Glass can be customized in a variety of types, colors, and thicknesses for improved privacy, protection, and thermal efficiency. Since we have our own glass fabrication plant we can do anything on glass. Printing your images/logos on glass, lamination, etching, gradient color transitions are just a few of what we can offer..

When it comes to finishes, any RAL color is possible, we can match colors you want or even “wood grain” style coatings are possible.
